**From Routledge :** The End of the Developmental State? (Routledge Studies in Development and Society) before purchasing it in order to gauge whether or not it would be worth my time, and all praised The End of the Developmental State? (Routledge Studies in Development and Society):

The End of the Developmental State? brings together leading scholars of development to assess the current status of

the "developmental state" in several developing and transitional economies of South Korea, Taiwan, Ireland, the United Kingdom, China, South Africa, Brazil and India. Has the concept of the developmental state become outmoded? These authors would suggest not. However, they do argue that the historical trajectories of developmental states in Asia, Latin America, Africa and Europe suggest all too clearly that the concept must be re-examined critically and creatively. The range and diversity of their positions and their rejection of stale programmatic positions from the past will revitalize the debate on the role of the state in social and economic transformation in the twenty-first century. By bringing together careful comparative analyses of national cases, in both the Global North and South, the volume highlights pivotal conditions ndash; economic restructuring, domestic politics, epistemic shifts and ecological limits ndash; that are forcing revision of the goals and strategies of developmental states and suggests that states that ignore these new conditions will indeed see the "end of the developmental state".

"What role can the developmental state play in addressing the complex challenges of the 21st century? Can economic competitiveness be promoted along with inclusion, participation and sustainability? What are the capacities, institutions, social bases and political coalitions that can underwrite an effective state in a globalizing world? The End of the Developmental State? not only provides a new analytical framework to tackle these critical questions but does so through a rich collection of grounded and theoretically innovative papers that shed new light on key cases. Rarely has such a collection been more timely, or more certain, to animate the debate on development." - Patrick Heller, Professor of Sociology, Brown University "This remarkable collection forces a major re-think of the idea of 'the developmental state' against the background of neo-liberal triumphalism. Going beyond formulaic theoretical models of recent decades, it insists upon the relevance of revised and revitalised notions of the developmental state, not merely for the South, but for a Northern hemisphere presently thrust into capitalist crisis. An absolutely essential and innovative read for all scholars of development." - Roger Southall, Professor Emeritus, Department of Sociology, University of the Witwatersrand "Critical knowledge on developmental states has lagged far behind the seismic transformations in the global economy in recent years. These shifts have profoundly affected the political contours and economic fortunes of both old and aspiring developmental states. Contributors to The End of the Development State? probe the experiences of key contemporary developmental states within a tightly-woven comparative theoretical framework. The book illuminates the opportunities and obstacles facing these countries and makes a significant contribution to debates on the roles of states and markets in development." - Gilbert Khadiagala, Professor of International Relations, University of the Witwatersrand "Leading authorities from around the world examine the concrete challenges of state-led development. Everything you want to know about the developmental state and why its end might have arrived." - Michael Burawoy, Professor of Sociology, University of California, Berkeley About the Author Michelle Williams is Associate Professor in Sociology and Chairperson of the Global Labour University Programme at the University of the Witwatersrand (Wits).
