Commission on Growth and Development : The Growth Report before purchasing it in order to gage whether or not it would be worth my time, and all praised The Growth Report:

0 of 0 people found the following review helpful. An operation manualBy Koo Tat KeeStandard neoliberal prescription. The strategies of growth are derived from the principles found in the Washington Consensus of the 1990s. After the Great Recession, it is natural to ask if the prescription is still relevant for today's emerging economies. On the other hand, the growth model of some of the fastest growing economies such as China, Russia and Brazil which includes heavy state involvement (sometimes known as state capitalism), offers a serious alternative to emerging economies in general and to authoritarian states seeking growth in particular. The Report fails to address the proper division of labour between state and market at different stages of economic development. Also, the discussion of the political economy of economic development is absent here. After all, the Report limits itself to a guidebook or manual of development.

bull; Why have only 13 developing world economies achieved sustained, high growth since World War II?bull; Why is engagement with the global economy necessary to achieve high growth?bull; Why do some countries' growth strategies fail to win the public's confidence?bull; Why are equity and equality of opportunity important components of successful growth strategies?bull; Why do many countries, blessed with natural resource wealth, not achieve high growth?bull; Why has no country ever sustained rapid growth without high rates of public investment?bull; Why does it not always pay to devalue the exchange rate? When does it?bull; Why is childhood nutrition so important to economic growth?bull; Why do some economies lose momentum when others keep on growing?bull; Why has no country ever sustained long-term growth without urbanizing?bull; Why should there be an end to energy subsidies?bull; Why do global warming and the rising prices of food, energy and minerals pose challenges to potential future growth in developing countries?bull; Why does the aging of the world population matter for developing countries growth and employment prospects? 'The Growth Report' does not have all the answers, but it does identify some of the key insights and policy levers to help countries achieve high, sustainable and inclusive growth. The result of two years work by 19 experienced policymakers and two Nobel prize-winning economists, 'The Growth Report' is the most complete analysis to date of the ingredients which, if used in the right country-specific recipe, can deliver growth and help lift populations out of poverty. About the Commission on Growth and Development Launched in April 2006, the Commission on Growth and Development brings together twenty-one leading practitioners from government, business, and the policymaking arenas, mostly from the developing world. The Commission is chaired by Nobel Laureate Michael Spence, former Dean of the Stanford Graduate Business School, and Danny Leipziger, Vice-President, World Bank, is the Commission's Vice-Chair. Over a period of two years the Commission sought to gather the best understanding there is about the policies and strategies that underlie rapid and sustained economic growth and poverty reduction. The Commission's audience is the leaders of developing countries. The Commission is supported by the Governments of Australia, Sweden, the Netherlands, and United Kingdom, the William and Flora Hewlett Foundation, and the World Bank.
