The work reads like an encyclopedia, but breaks away from that format with great anecdotes, historical perspective and contemporary context.A gifted writer as well as an intellectual titan in the field, Larry Harris - well I wish I was smart enough to take

him to lunch and pick his brain. If you really want to understand the value and potential profits found in market micro-structure, there are fewer books more informative, and I am sure Mr. Harris has read them all. Psst... Want to know more than your broker? Get the book, but only if you are intent on being a serious professional making gobs and gobs of money in short amounts of time. Otherwise, why would you work your way through this data type? The Lone Comic TM0 of 0 people found the following review helpful. Five Stars By J Amazing book on trading. 5 of 5 people found the following review helpful. Most helpful trading book I have read By Daniel Chang The author does not lay out a trading plan but he does give the blueprint if the reader uses his/her imagination. It's the kind of book one should read and then meditate on. In fact, they should ponder the material after each section. The insights that are shared would take the rest of us years and years of real world experience to glean. Here, Harris presents it to us on a golden platter, if we take a few moments to digest and review what he's shared. It should get your mind racing with possibilities. Couldn't ask for more, except perhaps for an updated edition.

This book is about trading, the people who trade securities and contracts, the marketplaces where they trade, and the rules that govern it. Readers will learn about investors, brokers, dealers, arbitrageurs, retail traders, day traders, rogue traders, and gamblers; exchanges, boards of trade, dealer networks, ECNs (electronic communications networks), crossing markets, and pink sheets. Also covered in this text are single price auctions, open outcry auctions, and brokered markets limit orders, market orders, and stop orders. Finally, the author covers the areas of program trades, block trades, and short trades, price priority, time precedence, public order precedence, and display precedence, insider trading, scalping, and bluffing, and investing, speculating, and gambling.
