From World Bank Publications : Urban China: Toward Efficient, Inclusive, and Sustainable Urbanization before purchasing it in order to gage whether or not it would be worth my time, and all praised Urban China: Toward Efficient, Inclusive, and Sustainable Urbanization:

1 of 1 people found the following review helpful. It's probably the most comprehensive and in-depth analysis of China's urbanization yet. By Li Yihao It's probably the most comprehensive and in-depth analysis of China's urbanization yet.

In the last 30 years, Chinas record economic growth lifted half a billion people out of poverty, with rapid urbanization providing abundant labor, cheap land, and good infrastructure. While China has avoided some of the common ills of urbanization, strains are showing as inefficient land development leads to urban sprawl and ghost towns, pollution threatens peoples health, and farmland and water resources are becoming scarce. With Chinas urban population projected to rise to about one billion or close to 70 percent of the countrys population by 2030, Chinas leaders are seeking a more coordinated urbanization process. Urban China is a joint research report by a team from the World Bank and the Development Research Center of Chinas State Council which was established to address the challenges and opportunities of urbanization in China and to help China forge a new model of urbanization. The report takes as its point of departure the conviction that China's urbanization can become more efficient, inclusive, and sustainable. However, it stresses that achieving this vision will require strong support from both government and the markets for policy reforms in a number of area. The report proposes six main areas for reform: first, amending land management institutions to foster more efficient land use, denser cities, modernized agriculture, and more equitable wealth distribution; second, adjusting the hukou household registration system to increase labor mobility and provide urban migrant workers equal access to a common standard of public services; third, placing urban finances on a more sustainable footing while fostering financial discipline among local governments; fourth, improving urban planning to enhance connectivity and encourage scale and agglomeration economies; fifth, reducing environmental pressures through more efficient resource management; and sixth, improving governance at the local level.
